KEY STRENGTHS

Backend & APIs

Services, REST APIs, B2B/B2C integrations

Production Operations

Linux, log analysis, hardening, troubleshooting

Systems Integration

Providers, clients, suppliers, third-party software

Data & Messaging

PostgreSQL/MySQL, Redis, RabbitMQ

Delivery

Docker, CI/CD, deployment and rollback

LANGUAGES

Italian

Native

English

B1 - Intermediate

JACOPO ELLERO

SOFTWARE ENGINEER

Backend | Systems Integration | Production Operations

PROFILE

Software Engineer with experience in backend development, systems integration and the operational management of production applications. I work across code, infrastructure and business processes: designing APIs and services, integrating external platforms, maintaining critical legacy systems and handling end-to-end troubleshooting. I work directly with business stakeholders, customers, suppliers and external developers, translating requirements and operational issues into verifiable technical solutions.

PROFESSIONAL EXPERIENCE

Space 1999 | Software Engineer - IT Operations & Integrations

June 2024 - Present

- Development and maintenance of management systems and services supporting B2B/e-commerce operations: catalogs, orders, purchasing, shipping, operational automation, and integrations with marketplaces, suppliers and carriers.
- Technical management of production Linux systems and high-volume databases: monitoring, log analysis, hardening, maintenance, cleanup, troubleshooting and release support.
- Requirements gathering and direct collaboration with business stakeholders on updates, fixes and new integrations.
- Technical coordination with international customers and suppliers on configuration parameters, anomalies and integration issues.
- Design, documentation and delivery of APIs enabling external software to securely access management-system capabilities.
- Support for colleagues in diagnosing and resolving application, infrastructure and operational issues.

Industrial Automation Company | Software Developer / Industrial Automation & IoT

2022 - 2023

- Development and integration of automation systems using PLCs, embedded C software, sensors, and data acquisition/analysis.
- Industrial and IoT communication via RS-485, RS-485/MQTT serial gateways, Wi-Fi and Bluetooth connectivity.
- Machine-to-cloud integration and connection between CODESYS runtimes and application servers for data exchange, commands and synchronization.
- Troubleshooting, testing and commissioning of devices, gateways and integrated systems.

Experienti S.r.l. | Software Developer & IT Support

2021 - 2022

- Design and development of APIs for business applications and implementation of an automation portal.
- Hardware support, help desk and technical assistance for users.

TECHNICAL STACK

Languages

PHP | Python | Go |
JavaScript/TypeScript | C/C++ |
Kotlin

Backend

Django/DRF | FastAPI | Symfony
components | REST APIs

Databases

PostgreSQL | MySQL/MariaDB | MSSQL |
SQLite

Messaging & async

RabbitMQ | Redis | Celery | MQTT

Infra & DevOps

Linux/Ubuntu | Nginx | PHP-FPM |
Docker/Compose | Git

CI & quality

GitHub Actions | Azure DevOps |
PHPUnit/pytest | PHPStan |
integration testing

Security

Hardening | secrets management |
OWASP | audit | backup/recovery

Industrial & IoT

RS-485 | MQTT | PLC/CODESYS | Wi-Fi
| Bluetooth/BLE | Modbus | OBD-II |
HTTP/HTTPS

EDUCATION

Technical Diploma in Computer Science

ITI Galileo Galilei - Gorizia |
2001-2004

University studies in ICT

Degree program not completed:
120/180 ECTS, 18/26 exams passed

PREVIOUS EXPERIENCE

Coworking "Artu Servizi Creativi" | Full Stack Developer & IT Operations

2014 - 2020

- Development and maintenance of websites and e-commerce platforms; management of company IT infrastructure.
- Software/hardware support and general technical assistance.

Computer Science Teaching | Instructor

2009 - 2013

- Basic and advanced courses on IT tools and concepts; student support.

SELECTED TECHNICAL PROJECTS

Welora / Welora Automation - PHP 8.4, Go, PostgreSQL, Redis, RabbitMQ, Docker

Modular management platform with a separate event-driven engine: versioned contracts, transactional outbox, idempotency, durable jobs, observability and cross-service end-to-end testing.

HAPA / HAPA Automation for Space 1999 - PHP, PostgreSQL, RabbitMQ, Docker

System for catalogs, orders, purchasing and shipping, with integrations to marketplaces, suppliers and carriers; external adapters, retry/backoff, reconciliation, secret storage and versioned configuration.

JD Industry - PHP, MariaDB, REST APIs

Solutions developed for multiple manufacturing companies: work-order management, industrial machine integration, APIs, polling and scheduling, production/alarm data collection, reconciliation and reporting.

AKIOS Kernel - C, CMake, embedded security

Firmware layer for BK7238 with cryptographic update verification, A/B storage, trial/rollback, local recovery and anti-brick protection.

Sentry Bee / Vehylo - C, FastAPI, MQTT, Kotlin, Android

R&D projects focused on sensors, telemetry and data acquisition: anomaly detection, MQTT, OBD-II/BLE diagnostics and dynamic signal mapping.

CORE CAPABILITIES

Integration & operations:

APIs, management systems, providers and devices; incident analysis, logging, hardening and operational continuity.

Architecture & quality:

Modular and event-driven systems, integration reliability, idempotency, testing, CI, code review and technical documentation.

Business interface & coordination:

Requirements gathering, technical translation and coordination with customers, suppliers, colleagues and external developers.
